

**WELL TESTED. NATURE APPROVED.**

# Industry Leading Incineration Technology

No odor. No Smoke. No visible flame... Excellent Emissions

At AWI we are dedicated to reducing oil and gas related production test flaring. Our low emission burner technology provides advancement over existing conventional flares and with over 80 years experience in incineration and production testing, we guarantee you superior results. Competitive rental rates, 24 hour service and client satisfaction; that's the AWI promise.

Alberta Welltest Incinerators is a private Alberta Company dedicated to reducing the environmental impact of oil & gas related production test flaring.

The AWI patent pending low emission burner technology provides a significant advancement over existing conventional flares and available enclosed flaring equipment. When your program includes sour wells, tight holes, or drilling in close proximity to populated areas, AWI's knowledge and advanced technology will provide you with your best results.

Our design alliance incorporates over 80 years of combined Incineration and Production Testing experience. We offer competitive rental rates, 24-hour service and the very best product on the market today.

Combustion Efficiencies  
over 99.9%

# Finally, a solution that eliminates the hassels...

Alberta Welltest Incinerators are efficient and hassel free.  
No more problems that are associated with  
enclosed flame technology.

AWI represents the best available technology to handle the effects of high volume flaring associated with well testing. Using a 304SS stack lined with four-inch fiber insulated modules, AWI is able to improve combustion and high internal temperature retention as well as prevent the ongoing concern of noise pollution. The automated air control configuration provides complete temperature based control of forced primary and secondary air delivery. The patented AWI burner system provides optimum fuel and air mixing energy ensuring industry leading combustion efficiencies.

The AWI Welltest Incinerators run quietly and efficiently, emitting no odor, no smoke, no visible flame and no heat radiation.

## Features include:

- Designed **Combustion Efficiencies over 99%**
- **Fiber lined Combustion Chamber** to maintain high incineration temperatures, and eliminate radiant heat
- **Patented Forced Draft multi Point Vortex Burner**
- **Automatic Dual Continuous Ignition Pilot Systems**
- **AEUB Directive 060 Compliant**
- **Continuous Temperature Measurement and Recording**
- **Fully Automated Forced Combustion Air Delivery System** ensuring high exit velocities and dramatically enhanced emissions
- **Integral Liquid Trap** for removal of any possible free liquids or carryover from the P Tank, helping to eliminate environmental spills and concerns
- **LPG Assist compatible** as may be required for Sour Well programs

## Setup is simple & completed in minutes:

- **Step 1** – Unload & Stand in Place, no guyed wires
- **Step 2** – Tie in gas line(s)
- **Step 3** – Hook up Generator
- **Step 4** – Open Pilot Fuel Valve & Push Start Button

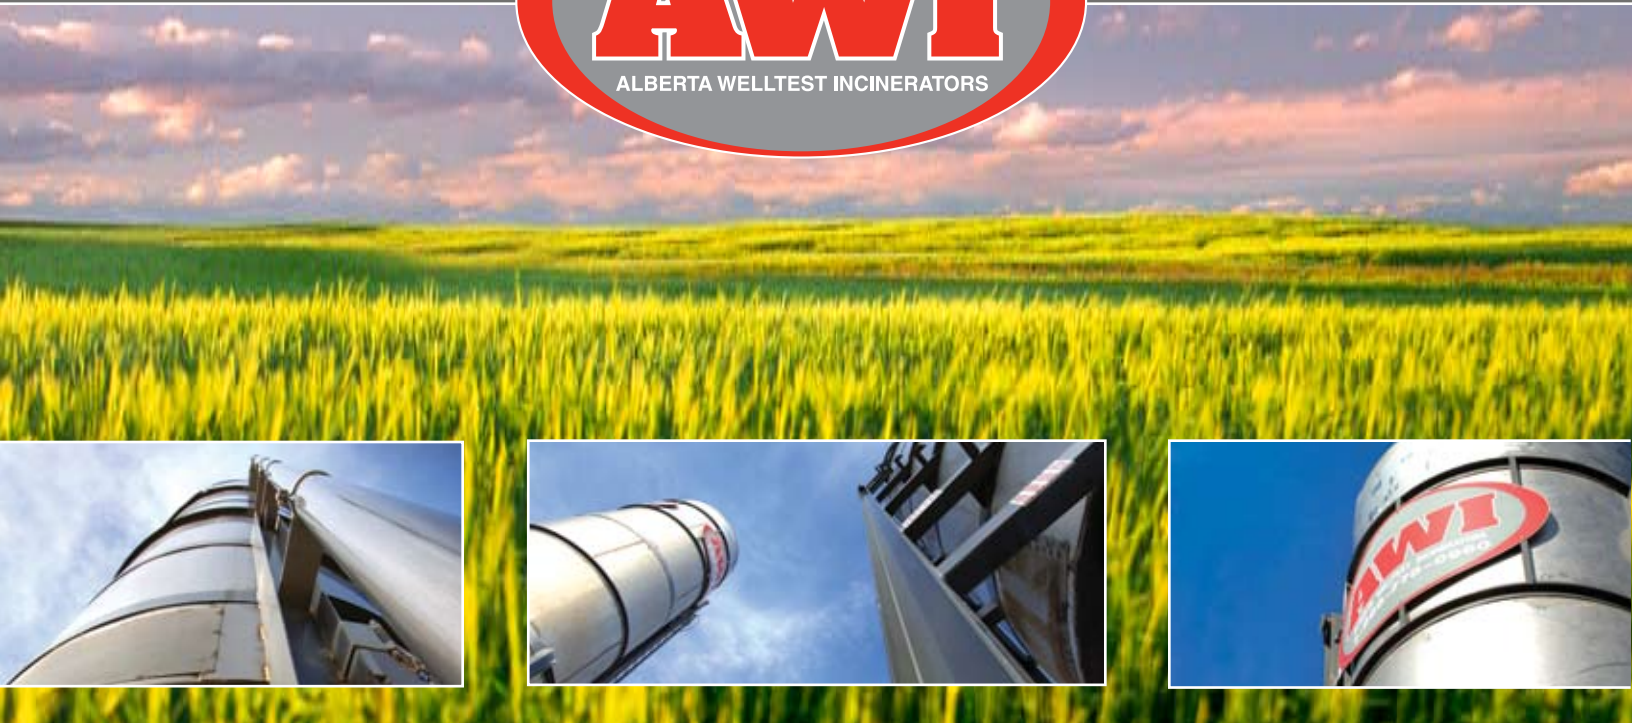

One Button. Turn it on. Walk Away.

AWI units are very safe and straightforward to operate. With only a 20 minute set up, the units are all L Skid Mounted, simple to load, transport and erect. There are no anchors or guy wires allowing for zero ground disturbance. Units are also LPG Assist compatible, as may be required for sour well programs. Features include the patented forced draft multi point vortex burner, automated air delivery system, dual pilot continuous ignition system and continuous temperature measurement and recording. Alberta Welltest Incinerators are AEUB Directive 060 compliant, trouble free and simple to operate.

There is nothing else in the market that can be compared in terms of efficiency, emissions, and simplicity of operations. The equipment is simple and quick to setup, easy to operate, and will provide the results you require, as promised.

Competitive Rental Rates Available upon Request.
